

WASHDOWN SYSTEM

The Swarf Unlimited Washdown System was developed out of necessity. As a machine shop, we were constantly battling swarf build-up while running aluminum production jobs and were desperate for a fast and simple solution. With limited options on the market, we began developing our own swarf management solution.

After countless hours of R&D and numerous prototypes, the end result is an easy-to-install system that includes a washdown with a high pressure pump, two three nozzle manifolds, and low micron sump filter screen compatible with HAAS machines.

WASHDOWN

Swarf-Unlimited's easy-to-install Washdown System uses a high-pressure pump to utilize a machine's existing coolant to washdown swarf to its intended location. The pump comes pre-wired to plug into the back of your HAAS machine.

Includes:

- High pressure pump with stainless steel wet end (replaces factory pump)
- 30 feet of ultra-flexible hose and 20 hose clamps with crimping tool
- Two washdown manifolds with three adjustable stainless-steel nozzles
- Eight magnetic hose clamps

SUMP FILTER SCREENS

Our bulk coolant filtration screens are designed to remove bulk and fine swarf before it even reaches your sump. Our easy-to-clean filter screens reduce maintenance time by allowing machine operators to quickly clear out swarf while the equipment is running, eliminating machine down time and increasing your profitability. We've seen an annual industry average savings of \$6,750.00 per machine from our customers.

SCREEN FILTER MODELS:

Compatible with HAAS 55 Gallon, 95 Gallon, and Pre 2008 35 Gallon Sumps

- Standard High Capacity (3X Capacity of factory screen)
- Low Profile (2X Capacity of factory screen)
- Pre-2008 35 Gallon Sumps (2X Capacity of factory screen)

MADE WITH:

- 6061-T6 Material
- All Stainless Hardware
- Heavy-Duty 316 Stainless-Steel Low Micron Screens
